

Leaking Washers

Ever had trouble with water leaking out of your windscreen washers at high speed? This is generally caused by the low pressure in front of the windscreen sucking water up the lines and out of the washer nozzles. It doesn't seem to be a problem with all cars and is probably related to the type of washer system you use. If you have hinged your bonnet at the back you can move the washer nozzles forward onto the bonnet itself. Another option is to drain all the water out of the washers - not very technical but it does work!
