

Oils aint Oils

by Eric Blythe

You can if you wish use one of the very high quality synthetic oils such as Mobil 1, but whatever you choose pick one with low viscosity when cool.. Use a 0/40, 10,40 or 15/40 oils in the Toyota 4AGE engine.. These thin oils give fast lubrication presence on start-up which is the time when most engine wear can occur. The most critical lubrication areas are on the cam followers and cams and these are best protected by lighter oils.
